

Normalization One John Kryspin

1. It'd a start. The tag numbers are not unique and the cost states its in USD which is good. The column names should use camel case in my opinion. The data is not sorted also. There also is no table name stated here. Also the packageID's should not be grouped and should be repeated for each row and not just thrown together. There is also no primary key

Output pane

	identity text	packageid text	tagnumber integer	installdate date	softwarecostusd numeric
1	i01	AC01	32808	2005-09-13	754.95
2	i02	DB32	32808	2005-12-03	380
3	i03	DB32	37691	2005-06-15	380
